

Day 1 (PYTHON) :

#day1

#1. Ask the user to enter 5 numbers one by one. Store them in a list. Print the list, the sorted version, and the total sum.

Program:

```
n=int(input())  
user=list(map(int,input().split()))  
print(user)  
print(sorted(user))  
print(sum(user))
```

output:

```
5  
2 3 4 5 4  
[2, 3, 4, 5, 4]  
[2, 3, 4, 4, 5]  
18
```

#2. Create a tuple of weekday names. Print each day using a for loop. Also print the day at index 3.

Program:

```
weekdays=("monday","tuesday","wednesday","thursday","friday","saturday","sunday")  
for item in weekdays:  
    print(item)  
print(weekdays[3])
```

output:

```
monday  
tuesday  
wednesday  
thursday  
friday  
saturday
```

sunday

thursday

#3. Ask the user to enter a name and a number. Print the name that many times using a for loop.

Program:

```
name=input()
number=int(input())
for i in range(0,number):
    print(name)
```

output:

shaik

5

shaik

shaik

shaik

shaik

shaik

#4. Create a list of 5 numbers. Find and remove the largest number, then print the updated list.

Program:

```
t=int(input())
n=list(map(int,input().split()))
largest_number = max(n)
print(largest_number)
n.remove(largest_number)
print(n)
```

output:

5

2 3 5 1 0

5

[2, 3, 1, 0]

#5. Create a mixed list with your name, age, and city. Print each item using a for loop with f-strings.

Program:

```
lst=["shaik",23,"Mumbai"]
```

```
for item in lst:
```

```
    print(f"{item}")
```

output:

shaik

23

Mumbai
